

Chương 1

The screenshot shows a web browser window with multiple tabs open. The active tab displays the homepage of Truong Dai hoc Thuy loi (Thuy loi University) at tl.edu.vn. The page has a yellow header with the university's logo and name. Below the header is a banner for the 14th National Party Congress. The main content area includes sections for "TIN TUC" (News) and "THONG BAO" (Announcements). The "THONG BAO" section lists several news items, including one about the visit of Tran Duc Thang to the university. To the right of the main content, the Chrome DevTools Network tab is visible, showing a list of requests made by the browser to the server. The requests listed include various files like CSS, JS, and images, along with their status codes and other metadata.

- Request URL: <https://tl.edu.vn/>

- Request Method: GET

- Status Code: 200 OK

- Câu hỏi : Có thể client tự thay đổi status code không? Bởi vì ban đầu SC là 200, về sau trang lỗi cái status trở thành 500 error(do client lỗi hay sever bị lỗi)
